Full Stack Web Developer with a proven track record of building and maintaining modern web applications. Built and maintained full-stack web applications using widely adopted web technologies, contributing to projects from database design to user interface development. Passionate about writing clean, maintainable code and delivering scalable solutions. Adept at working in cross-functional teams, and contributing to real-world, production-ready systems.

EXPERIENCES

Freelance Full Stack Developer **July 2026 - Present**

- Javelo: built a company profile website (https://naturalcocosugar.com/), a CMS dashboard, and a backend API end to end using Next.js, React.js, Hono, and Prisma.
- Soluship: building Solutrack, an operations dashboard and API for job orders, profit & loss, and invoices, synced to Accurate Online, using React.js, Hono, Drizzle ORM, PostgreSQL, and BullMQ.

Purwadhika **February 2022 - Present**

- Developed 6+ web platforms, including the landing page, admin dashboard, student dashboard, Purwadhika Career Network, Purwadhika College landing page, and Purwadhika API.
- Utilized Node.js, JavaScript, TypeScript, Express.js, Sequelize for backend development, and React.js, Next.js for frontend development with MySQL as the database.

Tariot Agency — Singapore (Part-time - Remote) **August 2025 - October 2026**

Contributed to full-stack web and mobile projects for clients in Singapore and Brunei, including service appointment systems for Toyota and Lexus dealerships:

- Built a wide range of features for the NBT Mobility and JMP admin dashboards and their backend APIs (NestJS, Prisma)
- Added features to the NBT Mobility mobile app (React Native), including onboarding and promo pop-ups
- Built Roachout (https://roachout.shop/) end to end — website, CMS, and backend — for a pest control brand based in Brunei
- Built Yao Ling Seafood Kitchen end to end — restaurant website, CMS, and backend
- Contributed to the Galaxy Pods website and Strapi CMS (https://galaxypods.com.sg/), including the 360° view feature
- Redesigned the Lexus Cup Brunei 2026 digital invitation flipbook

Fullstack Web Development Lecturer (Purwadhika) **March 2025 - September 2025**

Served as a lecturer for the Full-Stack Web Development program, delivering comprehensive lessons covering front-end and back-end development. Guided students from foundational concepts such as JavaScript fundamentals, HTML, and CSS through to advanced topics including React.js, Next.js, and Tailwind CSS for front-end development, as well as Express.js with Prisma for back-end API development. Taught TypeScript as the primary programming language throughout the course. Mentored students from the ground up, culminating in the development of a fully functional full-stack web application as their final project.

Kirei Wash (Part-time) **April 2024 - June 2024**

- Contributed to the development of Kirei Wash Application, focusing on projects such as the landing page, employee app, admin dashboard, and Kirei Wash API.
- Tech stack included TypeScript, Next.js, NestJS, Prisma.
- Implemented unit testing using Jest for reliability.

Fullstack Web Development Mentor (Purwadhika) **April 2023 - June 2023**

Acted as a mentor for the Full-Stack Web Development program, guiding multiple student teams during their final project phase, a capstone requirement for graduation. Took on a project manager-like role by defining task priorities, tracking progress, and ensuring timely delivery of each team's project. Provided hands-on technical guidance through regular Q&A sessions, helping students troubleshoot issues and make informed architectural decisions. Also served as one of the evaluators for the final project presentations, assessing the quality and completeness of each team's deliverables.

EDUCATIONS

Bina Nusantara University (BINUS) Online **May 2024 - July 2026**

Bachelor of Computer Science (S1) — Informatics Engineering
Thesis: *Design and Implementation of a Web-Based Prospect Management System for an Import Company: A Case Study of Glori Global Group*
Developed a CRM-like web application for an Indonesian import company as part of the thesis project. The system was designed to streamline customer follow-up processes, enabling the sales team to systematically track and manage prospect interactions. This ensured that no potential sales opportunities were missed due to lack of timely follow-ups, ultimately improving the company's overall sales pipeline management.

Fullstack Web Development Student **August 2021 - January 2022**

Purwadhika Digital Technology School

- Studied full stack web development, covering JavaScript, HTML, and CSS.
- Collaborated in a team environment to complete a final project.

Diploma of Mechatronic Engineering **September 2017 - August 2020**

Bandung Polytechnic of Manufacturing

- Final Project: "Rancang Bangun Program Antarmuka Labview dan Komunikasi Data Mesin CNC Router Engraving Berbasis Raspberry Pi" (Design and Development of a LabVIEW Interface Program and Data Communication for CNC Router Engraving Machine Based on Raspberry Pi).

SKILLS

Language : JavaScript, TypeScript

Front-end : React.js, Next.js, React Native, Tailwind CSS, MUI, HTML, CSS

Back-end : NestJS, Express.js, Hono, Prisma, Sequelize, DrizzleORM, Strapi

Database : MySQL, PostgreSQL

Tools : Vite, Git, Docker
